

Management of the Menopause

Sixth edition

Management of the Menopause is an outstandingly good handbook; balanced, independent and non-promotional. It is strongly recommended for all medical practitioners involved with and interested in women's health.

Prepared by well-respected specialists, with many years of practical experience in primary and secondary care, the latest edition draws on the publication in November 2015 of the NICE Guideline: *Diagnosis and Management of the Menopause*. This guideline is recognised as a landmark in addressing the broad sweep of issues associated with menopause.

The British Menopause Society publication has been meticulously researched and peer reviewed. Evidence-based, it is presented with great clarity and is well-referenced and indexed. It conforms to the essential principles of a sound textbook: interesting, accurate, relevant, readable and current.

It should be widely available and used by GPs, nurses and gynaecologists. BMS members and health professionals who attend the Special Skills Module for Menopause care receive a complimentary copy of *Management of the Menopause*.
